

MANURE MANAGEMENT PLAN

A Manure Management Plan must be kept and followed when applying manures and/or slurries to land. Where land falls in an NVZ, a completed and more detailed plan should already be in place and will meet the scheme requirements.

The scheme recommends the use of the Tried and Tested website (www.nutrientmanagement.org) for resources, templates and in the development of your Manure Management Plan.

As a minimum, all holdings must have a Manure Management Plan that:

- includes a farm map identifying **where** and **when** manure can/ cannot be applied. The map must show the areas stated in table A – and it is recommended that colour coding is used
- includes calculations of the Total Area Required to apply the manure/ slurry produced without exceeding a total nitrogen application rate of 250kg/ha/year (or less as required by legislation). Use the following calculation and the hectares needed by stock unit in Table B:
 - Number of stock units (by stock type) x months housed x Ha needed by stock unit = Total Area Required
 - E.g. 75 cows (650kg) x 6months x 0.039 = 17.55 ha required

If the map and calculations prove you have a Total Spreadable Area greater than the Total Area Required, the plan is complete. If the Total Spreadable Area is less than the Total Area Required, a more detailed plan or an alternative action is necessary.

Table A

Area	Area includes, but is not limited to:
Non-spreading areas	Fields where manure would not normally be spread; non-farmed woodlands or fields too far away from farm buildings
Water	Any ditches, watercourses and ponds, springs, wells and boreholes used for drinking water or farm dairies
Do not spread areas	Areas where manure should not be spread. At least 10m either side of ditches and watercourses, 50m around springs, wells and boreholes, steep slopes with a high risk of run-off, Environmentally Sensitive Areas, Sites of Specific Scientific Interest
High risk areas	Fields next to a watercourse, spring or borehole with soil at field capacity with moderate slope or slowly permeable soil; where soil depth over fissured rock is less than 30cm; with effective pipe or field drains
Very high risk areas	Fields likely to flood in some/ most winters; next to a watercourse, spring or borehole where surface is severely compacted or waterlogged or have a steep slope and the soil is at field capacity or have a moderate slope and slowly permeable soil
Low risk areas	All other areas not already marked

MANURE MANAGEMENT PLAN

Table B

Stock Unit	Hectares needed by Stock Unit		Stock Unit	Hectares needed by stock unit	
Cow (650kg)	0.039		Bull	0.019	
Cow (550kg)	0.032		Youngstock 1-2yr (400kg)	0.016	
Cow (450kg)	0.025		Youngstock 6-12months	0.008	
Heifer 2yr+ (500kg)	0.019		Calf	0.005	
Adult Sheep	0.003		Lamb (6-12 months)	0.002	
Lamb (up to 6 months)	0.001				
	Hectares needed by pig			Hectares needed by pig	
	at 250kg/ha	at 170 kg/ha		at 250kg/ha	at 170 kg/ha
Maiden gilts	0.052	0.076	Growers 8-12 weeks	0.025	0.037
Breeding sows & boars	0.080	0.118	Finishers over 12 weeks	0.042	0.062
Weaners 4-8 weeks	0.013	0.019
